Sir Frederick Mappin Building**

"Industry Driven Research"

**Dr Steve King CEng, FIET
EHM Specialist – Advanced Analytical Methods
EHM – Functional Systems Engineering
Rolls-Royce, Derby, UK**

Abstract

Research plays a key role in maintaining future growth for any large organisation. Rolls-Royce is no exception to this. Given the market sectors it operates across, the company places significant value in collaboration with its University network. This presentation provides an overview of the types of research activity the company has been involved in, with particular focus to areas familiar to the presenter. Hopefully, this will provide the audience with some relevant insight of some past projects and leave an impression on research life in industry.
