Average 6 CPD credits per day awarded
by the Royal College of Radiologists

INTRODUCTION

This is a four day course aimed at clinicians (obstetricians), midwives and sonographers wishing to undertake training in obstetric ultrasound, or who are already in training or practice. This will provide SHOs/Registrars with skills that fulfil key theoretical and practical aspects of the RCOG basic training log book requirements.

AIMS OF THE COURSE

The course has a very strong practical hands-on component in addition to enabling participants to understand the principles of pregnancy dating and fetal growth assessment. A basic introduction to other aspects of fetal surveillance will also be covered.

Monday 21 October 2013 – DAY 1: The Dating Scan 7 CPD

This will cover basic ultrasound controls and physics, assessment of fetal viability, pregnancy dating and common incidental gynaecological problems in the first trimester. Small group hands-on sessions will enable practical skills acquisition on accurate first trimester dating and viability assessment. BPD assessment is also covered.

Tuesday 22 October 2013 – DAY 2: The Dating Scan 2 6 CPD

Additional practical hands-on sessions to consolidate skills acquired on Day 1, allowing course participants practice in first trimester determination of viability, pregnancy dating and diagnosis of multiple pregnancy.

Wednesday 23 October 2013 – DAY 3: Fetal Growth & Wellbeing 6 CPD

Concentrating on assessment of fetal growth and the recognition and management of growth disorders. Hands-on sessions will cover measurement of fetal biometric parameters including assessment of liquor volume and the placenta. Small group hands-on sessions will ensure that each participant gets to measure each fetal growth parameter correctly.

Thursday 24 October 2013 – DAY 4: Fetal Doppler & BPP & OSATS 7 CPD

Introducing participants to high risk pregnancy assessment with comprehensive lectures on Fetal & Maternal Doppler assessment and a hands-on session on Umbilical Artery Doppler assessment, Fetal Biophysical Profile assessment will also be covered. There is a 'catch-up' session for revision of previous sessions and a parallel optional assessment session (OSATS on Fetal Wellbeing Assessment).

COURSE FEE FOR FOUR DAYS: £850 (individual days available)

For further details on this course and the Basic Transvaginal Ultrasound Course in Obstetrics and Gynaecology with live link on Friday 25 October 2013 please contact: Gill Burkinshaw, Course Co-ordinator
