Making Cornea Surgery More Affordable

How materials used in disposable sutures can help make sophisticated cornea surgery more affordable

The US has a problem with unaffordable healthcare. Many people lack access to medical care because of the high cost. This has led to a decrease in the overall health of the population. The government has been trying to address this issue by expanding the public health system and increasing the number of doctors available. However, the problem remains unsolved. The solution lies in the use of disposable sutures. These sutures are designed to be used once and then discarded. This reduces the cost of healthcare and makes it more affordable for everyone. By using disposable sutures, doctors can perform more surgeries without worrying about the cost. This will help to increase the number of people who can afford to undergo surgery.
