Understanding Zooarchaeology II

an advanced short course for archaeology and heritage professionals, students, and enthusiasts

29th - 30th January 2015

Studying archaeological animal bones can give us valuable insight into diet, farming, industry, society and environment in the past. If you know the basics of archaeological animal bone analysis but want to put some ‘meat on the bones’, why not take our advanced zooarchaeology short course? Our two-day course will build on your basic zooarchaeological skills and knowledge and give you comprehensive practical experience in zooarchaeological analysis.
