

Understanding Zooarchaeology I

a short course for archaeology and heritage professionals, students and enthusiasts

12th-14th September 2016

Animal bones and teeth are among the most common remains found on archaeological sites.

The University of Sheffield Zooarchaeology short course uses short lectures, discussions and practical classes to provide training in the theory and methods that can be used to understand animal bone evidence in archaeology.

For more information and details about the course why not take a look at our website?
