Department of Materials Science & Engineering.

MSc Materials Science and Engineering
It is estimated that 70% of innovations are due to an advance in materials. This course provides a solid grounding in all types of materials, and prepares you for a career in industry or academia, by teaching you the concepts, theories and practical skills that make materials science and engineering possible.

Our research led teaching introduces you to all the latest materials developments, and you will have the option to specialise in the area that interests you the most.

“The access to the world class manufacturing and testing facilities was thoroughly enjoyable. This allowed me to have a unique insight into additive layer manufacturing (ALM) which is at the cutting edge of current research and has been an interest to me for a long time.”

Alumni Emily Tyrwhitt-Jones — Graduate Engineer at BAE Systems
