

The ACE Project

Do you have experience working in trials that use adaptive designs; are you interested in using them; are you involved in reviewing adaptive grant proposals, research outputs, or regulatory submissions; or use findings from adaptive trials?

We are running a project to improve adequate reporting of clinical trials that use Adaptive Designs through the development of a CONSORT Extension with international collaborators (<https://www.sheffield.ac.uk/scharr/sections/dts/ctru/aceproject>).

We will be running Delphi surveys with as many people as possible to ensure we capture wide range of views of key stakeholders involved in clinical trials related activities involving adaptive designs.

We are interested in hearing from:

- Clinical trials researchers (clinical investigators, statisticians, trial methodologists, trial managers, health economists, etc)
- Regulatory assessors (such as EMA, FDA, MHRA, etc)
- Research Ethics Committees
- Journal editors and reviewers
- Research funders (public and private)
- Systematic reviewers

If you would like to take part in the Delphi surveys you can register on this link <https://surveys.npeu.ox.ac.uk/index.php/survey/index/sid/143519/newtest/Y/lang/en> or hear more about our research, please email the coordinator, Katie Biggs (c.e.biggs@sheffield.ac.uk) or the project lead, Munya Dimairo who would be happy to answer any questions you have (m.dimairo@sheffield.ac.uk).
