How independent academics engage in HTA in the UK

Professor Simon Dixon
Health Economics and Decision Science (HEDS), School of Health and Related Research (ScHARR), University of Sheffield
Wuhan, China, November 2017
Overview

- Sheffield and HTA
- HTA in the UK...it’s more than NICE
- The 7 roles of academic units
- Conclusions
HTA at Sheffield

- Sheffield has undertaken ≈110 technology appraisals for National Institute for Health and Care Excellence (NICE) since 1999
- At least 11 staff have served on NICE committees across at least six different NICE programmes
- Sheffield has led the NICE Decision Support Unit (DSU) since 2003
  - Provides training, methods development and specialist support for appraisals
HTA in the UK

- NICE Technology Appraisal Programme has very little direct influence on the total expenditure of the NHS
  - Most drugs are not appraised by NICE
  - Uptake of guidance is a lot less than 100%
- But, there are other programmes and organisations undertaking HTA, with different methods
Other programmes...

- NICE Diagnostic Appraisal Programme
- NICE Highly Specialised Technologies
- NICE Medical Technologies Evaluation Programme
- NICE Clinical Guidelines
- NICE Public Health Appraisal Programme
- Joint Committee on Vaccination and Immunisation
- National Screening Committee
- NHS England Specialised Commissioning
7 roles of academic units

- Independent appraisal
- Methods development
- Training
- Capacity building
- Evidence generation
- Independent advice
- Company submissions!
Independent appraisal

- NICE requires appraisals to be undertaken either from first principles or reviews of submissions
- Organisations doing this work are:
  - Universities
  - NICE
  - Public and private sector contract research organisations
- Issues.....?
  - Quality assurance, ability to publish, contracting, methods of appraisal
Methods development

- NICE DSU has undertaken various types
  - Reference case
  - Technical standards
  - Other issues as they arise (e.g., Managed Entry Agreements)
- Other programmes
  - Department of Health (e.g., Value Based Pricing)
  - NHS England (e.g., Specialist Commissioning)
- Independent methods development
  - NICE Threshold (York)
  - EQ-5D-5L (Sheffield)
Training & capacity development

- Training
  - Committee members
  - Assessment groups
- Capacity development
  - Masters Programmes
- Issues...?
  - Wider training, including health system decision makers?
  - Different Masters programmes are required for different parts of the HTA system
  - Masters curriculum development? Accreditation?
Evidence generation, advice and submissions

- Evidence generation
  - Study design for evidence gaps
  - Approval with research
- Advice
  - Source of Committee members
  - Informal discussions
- Company submissions
  - Advisory boards and informal advice
  - Research...systematic reviews, meta-analyses, modelling
Conclusions

- Different methods are needed for different decision making contexts
  - Factors include social, political and academic traditions, objectives of the service, nature of the technology and its evidence base and the role of manufacturers
- Academic units have more than one role to play
  - Appraisal, methods development, training, capacity building, evidence generation, advice and company submissions
- Learn from other countries
  - All of my examples have come from just one country...other potential roles for academic units will exist
